Writing Practice Test 6

HOW TO USE

You have 2 ways to access the test

1. Open this URL <https://link.intergreat.com/CAqWZ> on your computer
2. Use your mobile device to scan the QR code attached

WRITING TASK 1

You should spend about **20** minutes on this task.

The graph below shows the amounts of waste produced by three companies over a period of 15 years.

Summarise the information by selecting and reporting the main features and make comparisons where relevant.

You should write at least **150** words.

WRITING TASK 2

You should spend about **40** minutes on this task.

Some people think that instead of preventing climate change, we need to find a way to live with it. To what extent do you agree or disagree?

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

You should write at least **250** words.

SAMPLE WRITING TASK 1

Sample Band: 9

The line graph compares three companies in terms of their waste output between the years 2000 and 2015.

It is clear that there were significant changes in the amounts of waste produced by all three companies shown on the graph. While companies A and B saw waste output fall over the 15-year period, the amount of waste produced by company C increased considerably.

In 2000, company A produced 12 tonnes of waste, while companies B and C produced around 8 tonnes and 4 tonnes of waste material respectively. Over the following 5 years, the waste output of companies B and C rose by around 2 tonnes, but the figure for company A fell by approximately 1 tonne.

From 2005 to 2015, company A cut waste production by roughly 3 tonnes, and company B reduced its waste by around 7 tonnes. By contrast, company C saw an increase in waste production of approximately 4 tonnes over the same 10-year period. By 2015, company C's waste output had risen to 10 tonnes, while the respective amounts of waste from companies A and B had dropped to 8 tonnes and only 3 tonnes.

SAMPLE WRITING TASK 2

Sample Band: 8.5

Climate change is the greatest threat to the existence of life on earth. Some people, however, argue that instead of preventing it we should find a way to live with it. I completely disagree with this opinion, because I believe that we still have time to tackle this issue and reduce our impact on the climate of earth.

Global warming is the main cause of climate change. If both the people and the governments take appropriate actions, this can be controlled to a great extent. For example, the governments should stop the generation of power from fossil fuels which cause more carbon emissions and increase global warming. Governments can also invest in green energy sources like wind, solar and hydropower. Another practical solution that the government can implement is to impose 'green taxes' on industries and vehicles which emit carbon. Individuals should also try to reduce their carbon footprint by limiting the use of private vehicles and consuming energy responsibly.

Trying to live with climate change instead of preventing it is a dangerous idea because in the near future, climate change will make our planet inhabitable. Because of global warming polar ice is melting causing sea levels to rise. When the sea levels rise coastal cities will get submerged in water. Let us not forget the fact that almost all major cities in the world are extremely close to seas and oceans. Climate change also leads to various natural calamities like cyclones, flooding and drought.

To conclude, when there are so many ways to prevent climate change, I cannot agree with the argument that we should find a way to live with it. Climate change is threatening our very existence on this planet and it is high time we did something to tackle this alarming issue.
