

IELTS Mock Test 2022 May

Writing Practice Test 2

HOW TO USE

You have 2 ways to access the test

1. Open this URL <https://link.intergreat.com/6Wpuy> on your computer
2. Use your mobile device to scan the QR code attached

WRITING TASK 1

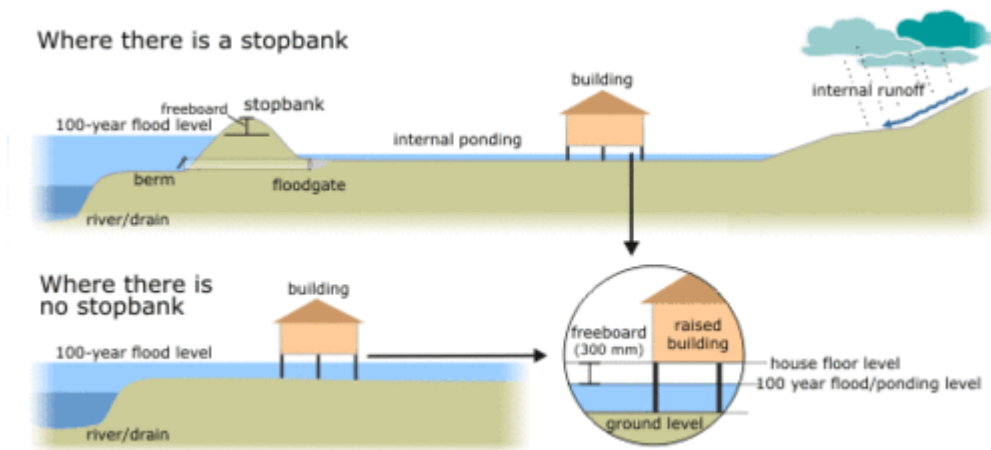

You should spend about **20** minutes on this task.

The diagrams below show how houses can be protected in areas which are prone to flooding.

Write a report for a university, lecturer describing the information shown below.

Summarise the information by selecting and reporting the main features and make comparisons where relevant.

You should write at least **150** words.

WRITING TASK 2

You should spend about **40** minutes on this task.

Write about the following topic.

Some people think that we should divide students based on their academic ability, while others think we should educate all students together. Discuss both views and give your opinion.

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

You should write at least **250** words.

SAMPLE WRITING TASK 1

The diagrams illustrate two different methods to protect houses in the areas which are easily flooded.

Overall, the key distinction between two diagrams is the flood protection with or without the existence of a stopbank. In addition, in each case, the level of house floor is always above ground level.

The first diagram shows the way stopbank is used to prevent the river water from flooding the area. The stopbank is a mound of land locating near the berm which is always higher than the 100-year flood level. The difference between this level and the highest point of the stopbank called the 'freeboard'. Beneath the stopbank, there is a floodgate used to adjust the water level of internal ponding. Building the house on stilts is also an additional measure to deal with flooding in this case.

The second diagram illustrates how to protect houses without the help of a stopbank. There will be nothing to stop the river from flooding, so the solution is raising the floor level by putting the houses on stilts. The height of stilts is calculated so that the floor level in this case is 300 mm above the 100-year flood level. This measurement is also known as the 'freeboard'.

SAMPLE WRITING TASK 1

Sample Band: 9

The diagrams compare two different methods of defence for homes which are at risk of being flooded.

The key difference between the diagrams is that they show flood protection with and without a stopbank. In either case, the at-risk home is raised on stilts above ground level.

The first diagram shows how a stopbank acts as a flood barrier to stop river water from flooding homes. The stopbank is a small mound of land next to the river that is higher than the 100-year flood level, and prevents the river from bursting its banks. Nearby houses can be built on stilts to prevent flooding from rainwater, and a floodgate beneath the stopbank can be opened to allow this 'ponding' to drain off into the river.

When there is no stopbank, as shown in the second diagram, there will be nothing to stop the river from flooding. In this case, the solution is to put buildings on stilts. The height of the stilts is measured so that the floor of the house is 300mm above the 100-year flood level. This measurement is called the 'freeboard'.

SAMPLE WRITING TASK 2

Couple are the people who decide to use a same route for walking together. Tested by the

harsh obstacle, the couple still help each other and believe in their love and faithfulness. The wedding ceremony is just an official declaration however cohabitation is believed and applied by young people before wedding is set. Someone thinks it is a benefit for couple but others think it is not.

Lover in some countries such as Thailand is expected to have good behavior. Every family teach their children belong to the custom. Each girl is placed in tradition to reserve herself. The practice in the society is so strong to determine to people action that the black sheep is blamed. In addition, their parents may be looked down on. The cohabitation might not happen throughout in these countries. Still, a man invited by her family is a good sign to become a member of the family. Both sides of the couple family which are familiar with each side encourage to make a family.

With regard to western countries, the custom is quite unlike to the eastern countries. Cohabitation is widely seen in the adolescents. Holding hand and kissing are the normal occurrence. Besides, couple feel freely telling about cohabitation. It is a good sample of life before wedding so preparation for making family by learning your couple is pretty crucial. They can stay together as if they separate to be a stranger

In conclusion, I think to keep the lover's status depends on the experience they passed. Cohabitation is a means to measure for lifelong relationship. I agree with any method to get a solution; long-lasting lover. In near future, some countries which now cohabitation remain unacceptable maybe gradually adapt to universal ideas. The wedding couple will live with happiness with rare divorcement.
