

IELTS Practice Tests Plus Volume 1 Listening Practice Test 5

HOW TO USE

You have 2 ways to access the listening audio

- 1. Open this URL https://link.intergreat.com/fxrdA on your computer
- 2. Use your mobile device to scan the QR code attached

Questions 1-6

Complete the form below.

Write NO MORE THAN THREE WORDS or A NUMBER for each answer.

CUSTOMER ORDER FORM

Example:
ORDER PLACED BY: John Carter
ACCOUNT NUMBER 1
COMPANY NAME 2
Envelopes
Size A4 normal
Colour 3
Quantity 4
Photocopy paper
Colour 5
Quantity 6
Questions 7-9 List THREE additional things that the man requests.
Write NO MORE THAN THREE WORDS for each answer.
7
8
9

Question 10

Complete the notes.

Write NO MORE THAN THREE WORDS AND/OR A NUMBER for your answer.

Special instruction	ıs:
Deliver goods 10	
•	

Questions 11-20

Complete the notes below.

Write NO MORE THAN THREE WORDS for each answer.

Access https://ieltsonlinetests.com for more practices

Artist's Exhibition				
General details:				
Place: 11 No. 1 12				
Dates: 6th October - 13				
Display details:				
jewellery furniture ceramics 14 sculpture Expect to see: crockery in the shape of 15 silver jewellery, e.g. large rings containing 16 a shoe sculpture made out of 17 Go to demonstrations called: 18				
Artist's Conservatory				
Courses include:				
Chinese brush painting				
19				
silk painting				

Fees include:	
Studio use	
Access to the shop	
Supply of 20	

Questions 21-23

Complete the sentences below.

Write NO MORE THAN THREE WORDS for each answer.

According to Alison Sharp, bear ancestors date back 21	years.
Scientists think bears were originally in the same family as 22 _	
The Cave Bear was not dangerous because it 23	

Questions 24-28

\circ						. •

----	--	--

Questions 29-30

Check TWO letters A-F.

Which TV	VO actions are mentioned to help bears survive?			
A	breeding bears in captivity			
ВП	encouraging a more humane attitude			
C	keeping bears in national parks			
\Box	enforcing international laws			
E	buying the speaker's book			
F	writing to the United Nations			
Questi	ons 31-36			
Choose the correct letters A-C.				
31 The sp	eaker compares a solar eclipse today to a			
AO	religious experience.			
ВС	scientific event.			
CO	popular spectacle.			
32 The speaker says that the dark spot of an eclipse is				
A O	simple to predict.			
ВО	easy to explain.			
CO	randomly occurring.			
33 Conce	rning an eclipse, the ancient Chinese were			
A O	fascinated.			
ВО	rational.			
CO	terrified.			
34 For the speaker, the most impressive aspect of an eclipse is the				
AO	exceptional beauty of the sky.			
ВО	chance for scientific study.			

- c effect of the moon on the sun.
- 35 Eclipses occur rarely because of the size of the
 - A C moon.
 - B o sun.
 - c c earth.

36 In predicting eclipses, the Babylonians were restricted by their

- A C religious attitudes.
- B C inaccurate observations.
- c C limited ability to calculate.

Questions 37-40

Complete the table below.

Write NO MORE THAN THREE WORDS for each answer.

Date of eclipse	Scientists	Observation
1715	Halley	37 who accurately predicted an eclipse
1868	Janssen and Lockyer	discovered 38
1878	Watson	believed he had found 39

1919	Einstein	realised astronomers had misunderstood 40
1919	Einstein	ζ

Solution:

Part 1: Question 1 - 10

1 692411

2 Rainbow Communications

3 white

4 two/2 boxes

5 light blue

6 10 packs/ten packs

- 7 (coloured) (floppy) disks
- 8 (a/one) wall calendar

9 (a/new) catalogue

10 before 11.30/not after 11.30

Part 2: Question 11 - 20

11 Royal Museum

12 Queen's Park Road/Rd

13 10th Dec(ember)

14 metal work

(garden)vegetables

16 coloured stones

(white) paper

18 Face to Face

19 pencil drawing

20 all materials

Part 3: Question 21 - 29

21 forty/40 million

22 dogs/the dog

(only ate) plants

24 (The) Polar Bear

25 (The) Brown Bear

(The) Sun bear

(The) Giant Panda

(The) Sloth Bear

- 29 30 B,E
- **Part 4: Question 31 40**
- **31** C

32 E

33 C

34 B

35 A

36 C

37 (the) first person

- 38 (a)new element/helium
- (the) lost planet/(the) new planet/Vulcan
- 40 gravity

Section 1

Recorded voice: Thank you for calling Millenium Office Supplies. If you would like to place an order, please press one. Your call has been placed in a queue. A customer service operator will be with you shortly.

Woman: Gina speaking. How can I help you?

Man: Oh, hello - I'd like to order some stationery, please.

Woman: And who am I speaking to?

Man: Example John Carter.

Woman: Right - can I just confirm your account number and the name of your company,

John?

Man: Sure! The account number is Q1 6 9 2 4 double 1

Woman: Six nine two four one one. Right, and you're from 'Rainbow Computers?'

Man: No. The company is **Q2** Rainbow Communications

Woman: Oh, OK, I'll just fix that on the system ... communications. And what would you like

to order, John?

Man: Envelopes. We need a box of A4 - that is, normal size envelopes

Woman: White, yellow or vanilla?

Man: Q3 We'll have the plain white please - but the ones with the little windows

Woman: OK ... One box - A4 - white - just the one box, was it?

Man: Q4 Um, on second thoughts make that two boxes. We go through heaps of envelopes.

As a matter of interest. Are they made from recycled paper?

Woman: No. You can't get white recycled paper. The recycled ones are grey and they're more

expensive actually.

Man: Right - we'll stick to white then.

Woman: Something else, John?

Man: Yes, we need some coloured photocopy paper. What colours do you have?

Woman: We've got purple, light blue, blue, light green - whatever you want, pretty much.

There are 500 sheets to the pack.

Man: Let's see ... Q5 we're going to need a lot of blue paperfor our new price lists so can you give us ten packs, please. Make sure Q5 it's the light blue though ...

Woman: Q6 Ten packs of the light blue. Anything else that we can help you with?

Man: Let me think ... what else do we need? I'm sure there was something else.

Woman: Pens, paper clips, fax paper, computer supplies, office furniture?

Man: Oh, yes! Q7 We need floppy disks - do you have those Q7 nice coloured ones?

Woman: Yes, but they're a bit more expensive than the black ones.

Man: That's alright. I'm not paying, anyway!

Woman: Right. Floppy disks. And what about diaries for next year? We've got them in stock already and it's a good idea to order early.

Man: No - I think we're alright for diaries but something we do need is **Q8** one of those big wall calendars - you know, one that shows the whole year at a glance. Do you stock those?

Woman: We certainly do.

Man: OK - can you include a wall calendar then, with the other stuff. Just make sure it's got the whole year on the one side.

Woman: Sure - and do you have a copy of our **Q9** new catalogue?

Man: No, I don't, but could you send one.

Woman: Yes! I'll pop one in with the order. You'll find it a lot easier to remember what you need if you have our catalogue in front of you next time.

Man: Yes, good idea. And when can you deliver this?

Woman: Should be with you tomorrow morning.

Man: Can you make sure that it's Q10 not after 11.30am because I have to go out at 12 there's only myself here on Fridays.

Woman: Fine - I'll make a note on the delivery docket that they should **Q10** deliver before half past eleven. Thanks very much.

Man: Thanks.

Section 2

Announcer: And now for some information on local events and activities. A couple of announcements for art- lovers and budding artists alike. First, a new collection of artwork is going on show to the public next month in the form of an artists' exhibition. The exhibition will Access https://ieltsonlinetests.com for more practices

include many different types of art ... over 100 different pieces, by 58 artists from the local area. **Q11** It's being held at the Royal Museum which - for those of you who are unfamiliar with the area - is located opposite the library in West Street, right on the corner... **Q12** the actual address is number 1. Queen's Park Road - it isn't difficult to find. The exhibition will run for 9 weeks and will begin on the 6th of October **Q13** and continue until the 10th December. So there's plenty of time for you to go along and have a look and I'm sure that will be worth doing.

What will you see there? Well, amongst the items on display will be some exciting pieces of modern jewellery, furniture, ceramics, Q14 metal work and sculpture. To give you some examples ... Local artist Kate Maine will be there to discuss her collection of pots and bowls Q15 that she has made to resemble garden vegetables. They're the sort of thing that would brighten up any dining table, and range from things like yellow cabbage-shaped bowls to round tomatoshaped teapots. Prize-winner Cynthia Course, will also be there to talk about her silver jewellery, all of which she produced using ideas from the rural setting of her country home. Some of her rings are quite extraordinary Q16 and have beautiful coloured stones in them. Or if you prefer sculpture, there's plenty of that too. Take, for example, Susan Cup's sculpture of Q17 25 pairs of white paper shoes. It sounds easy, but believe me it looks incredible! All of these items along with many others will be on sale-throughout the exhibition period.

As part of the exhibition, there will be **Q18** a series of demonstrations called 'Face to Face' which will take place every Sunday afternoon during the exhibition and these will provide an opportunity for you to meet the artists.

The second set of activities are for those who would prefer to indulge in some artwork themselves ... the Artist's Conservatory are holding a series of courses over the autumn period. The courses cover all media and include subjects such as Chinese brush painting, **Q19** pencil drawing and silk painting. All the tutors are experienced artists, course sizes are kept to a minimum of 15 and there will be plenty of individual assistance.

All the sessions offer excellent value for money and the opportunity to relax in a delightful rural setting. Fees are very reasonable and include the use of an excellent studio and access to the art shop which you will find sells everything from paper to CDs and they also include the Q20 provision of all materials. For more information on dates, cost and availability you should get in touch with the programme co-ordinator on 4592 839584 or go direct to the website ...

Section 3

Interviewer: Alison Sharp has spent much of her life researching bears and in particular bears in danger of extinction. She is the author of a recent book on bears and we welcome her to the studio today.

Alison: Thank you. Delighted to be here.

Interviewer: First of all, can you give us a quick overview of the history of the bear family?

Alison: Well, the bears we know today actually **Q21** have as their ancestors bears which have been evolving for some 40 million years. We have fossils of the earliest 'true bear' - and it's important to emphasise this because some creatures are called bears but are not ...

Interviewer: ... such as koalas for instance.

Alison: Yes exactly ... fossils of the true bear show a small dog-size animal with characteristics that show a **Q22** blending of dog and bear traits.

Interviewer: So the general belief is that **Q22** dogs and bears were of the same family?

Alison: Yes, that's the theory. And then we see the arrival of the early Cave Bear. We know from cave drawings that Neanderthal man used to worship this bear and at the same time fear it.

Interviewer: Understandable perhaps ...

Alison: Yes, but they need not have worried because the Q23 Cave Bear only ate plants. In fact the Cave Bear survived two Ice Ages but then became extinct.

Interviewer: So how many bears can we find today and are any of them in danger of extinction?

Alison: Well I'll answer your first question first. There are eight species of bear in all; among them the American Black Bear and the Brown Bear - from which evolved Q24 the newest species of bear - the Polar Bear.

Interviewer: So how old is the Polar Bear?

Alison: Oh, he's a relative newcomer - just 20,000 years old.

Interviewer: And could you tell us a little about them? Which is the largest bear, for instance?

Alison: Well, the largest bear existing today is either the Polar Bear or the Brown Bear.

Interviewer: Right ... Don't we know?

Alison: Well, it depends which criteria you use. The Polar Bear is the heaviest; the male weighs up to 1,500 pounds but his narrow body actually makes him look smaller than the much more robust Brown Bear.

Interviewer: So the Q25 Brown Bear appears the biggest.

Alison: Yes.

Interviewer: And the smallest?

Alison: Well, the **Q26** Sun Bear is the smallest of the eight species. They only weigh

Access https://ieltsonlinetests.com for more practices

between 60 and 145 pounds.

Interviewer: That makes him a comparative junior!

Alison: Yes. And then next we have the so-called Giant Panda ... but that's a small bear too, comparatively speaking.

Interviewer: And are all bears meat eaters?

Alison: No, not at all. In fact the **Q27** Giant Panda is almost entirely herbivorous living on a diet of 30 types of bamboo.

Interviewer: Oh, yes of course. Panda's are famous for that.

Alison: And another interesting bear is the **Q28** Sloth Bear which eats insects, particularly termites. He can turn his mouth into a tube and suck the insects out of their nests.

Interviewer: So going back to my second question ... Are bears really in danger of extinction?

Alison: Yes indeed ... they are ... the Sun Bear in particular as they've been hunted almost out of existence. And the habitat of the Panda is also being reduced on a daily basis.

Interviewer: Can anything be done to reduce the threat to these endangered species? I know for instance that it's very hard to breed bears in captivity.

Alison: Yes, well ... I think that by raising people's awareness generally we can reduce conflict between humans and animals ... Q29 to stop the slaughter in parts of the world where bears are still hunted - supposedly in self- defense or to protect livestock, but ... often quite unnecessarily. And Q29 we can also encourage governments to preserve the natural environment of the bear rather than allow the areas where they live to be systematically destroyed in the name of progress.

Interviewer: Yes, of course.

Alison: And in addition to these global efforts, all profits from Q30 the sale of my book will go towards the United Nations Bear Protection program.

Interviewer: That's wonderful ... and with the news coming up, thank you for your time, Alison, and best of luck with the book...

Alison: Thank you very much.

Section 4

Male: Good evening and welcome to this month's Observatory Club lecture. I'm Donald Mackie and I'm here to talk to you about the solar eclipse in history.

A thousand years ago, a total eclipse of the sun was a terrifying religious experience - but these days an eclipse is more likely to be **Q31** viewed as a tourist attraction than as a scientific or spiritual event. People will travel literally miles to be in the right place at the right time - to get the best view of their eclipse.

Well. What exactly causes a solar eclipse - when the world goes dark for a few minutes in the middle of the day? Scientifically speaking, **Q32** the dark spot itself is easy to explain: it is the shadow of the moon streaking across the earth. This happens every year or two, each time along a different and, to all intents and purposes, a seemingly random piece of the globe.

In the past people often interpreted an eclipse as a danger signal heralding disaster and in fact, Q33 the Chinese were so disturbed by these events that they included among their gods one whose job it was to prevent eclipses. But whether or not you are superstitious or take a purely scientific view, our earthly eclipses are special in three ways.

Firstly, there can be no doubt that they are very beautiful. It's as if a deep blue curtain had fallen over the daytime sky as the sun becomes a black void surrounded by the glow of its outer atmosphere.

But beyond this, total eclipses possess a second more compelling beauty **Q34** in the eves of us scientists ... for they offer a unique opportunity for research. Only during an eclipse can we study the corona and other dim things that are normally lost in the sun's glare.

And thirdly, they are rare. Even though an eclipse of the sun occurs somewhere on earth every year or two, if you sit in your garden and wait, it will take 375 years on average for one to come to you. **Q35** If the moon were any larger, eclipses would become a monthly bore if it were smaller, they simply would not be possible.

The ancient Babylonian priests, who spent a fair bit of time staring at the sky, had already noted that there was an 18- year pattern in their recurrence Q36 but they didn't have the mathematics to predict an eclipse accurately. It was Edmund Halley, the English astronomer, who knew his maths well enough to predict the return of the comet which, incidentally bears his name, and in 1715 he became Q37 the first person to make an accurate eclipse prediction.

This brought eclipses firmly into the scientific domain and they have since allowed a number of important scientific discoveries to be made. For instance, in the eclipse of 1868 two scientists, Janssen and Lockyer, were observing the sun's atmosphere and it was these observations that ultimately **Q38** led to the discovery of a new element. They named the element **Q38** helium after the Greek god of the sun. This was a major find, because helium turned out to be the most common element in the universe after hydrogen. Another great triumph involved Mercury ... I'll just put that up on the board for you now. See - there's Mercury - the planet closest to the Sun - then Venus, Earth, etc. For centuries, scientists had been unable to understand why Mercury appeared to rotate faster than it should. Some astronomers suggested that there might be an undiscovered planet causing this unusual orbit and even gave it the name 'Vulcan'. During the

eclipse of 1878, an American astronomer, **Q39** James Watson, thought he had spotted this so-called 'lost' planet. But, alas for him, he was later obliged to admit that he had been wrong about Vulcan and withdrew his claim.

Then Albert Einstein came on the scene. Einstein suggested that rather than being wrong about the number of planets, astronomers **Q40** were actually wrong about gravity. Einstein's theory of relativity - for which he is so famous - disagreed with Newton's law of gravity in just the right way to explain Mercury's odd orbit. He also realised that a definitive test would be possible during the total eclipse of 1919 and this is indeed when his theory was finally proved correct.

So there you have several examples of how eclipses have helped to increase our understanding of the universe, and now let's move on to the social ...
